L18: Entry 31 of 61

File: USPT

Jun 24, 2003

DOCUMENT-IDENTIFIER: US 6584451 B1

TITLE: Facilitator for aggregating buyer power in an on-line market system

Detailed Description Text (9):

In addition, SellCo may disclose the prices at which it is willing to sell, as a way of attracting interest. After an initial phase, the market would publish to buyer the additional quantity of buyers needed to achieve each price point. The disclosure of potential prices may get bids from people who are scared by the low quantity price. In addition, the knowledge that the price will drop with a few more bids gives buyers a reason to evangelize or raise their own bids to get in on the deal.

Detailed Description Text (43):

Sellers may wish to submit a new schedule entirely. Since committed buyers and current shoppers expect that they will be able to make purchases based on the quoted price, sellers should not be able to submit arbitrary new schedules effective immediately and retroactively. One option is to require that the new schedule offer better deals than the old. Better could mean all price points are as low or lower (not all equal) or that overall it looks like a better deal. (The "better overall" option is fuzzy and probably unworkable.) Another is to delay the new schedule by an hour and let everyone committed under the old schedule keep their deals.

Detailed Description Text (83):

The OBCS could just stop receiving buy bids when it realizes that it has willing buyers for all available goods. Any buyers in the process of submitting a bid would be out of luck. If the system reserved a percentage of the goods and shut down when it had sold all but the reserve, then those buyers already submitting bids could still get their orders filled. The remainder of the reserves could then be distributed by auction or by lottery. A final way to deal with excess supply is for the late bids to take delayed delivery. This would need to be combined with one of the first mechanisms to cover the unusual cases where the seller cannot supply all of the demand even with an extended schedule.
